TRACK CONTROL SAVE

UPI

PROBLEM STATEMENT

Business Spends Management is an industry agnostic problem

Problems faced by businesses having blue collar employees making spend

Flow of transactions

Worker requests money for spends at a site.

He is either paid in cash or the amount is transferred to his personal bank account.

He withdraws cash from the ATM and records the transactions manually.

Reports are submitted either manually or via Whats app after the closure of the site.

Policy check and approvals.

The accounts team then has to compile and reconcile the expenses of the particular site.

Problems in traditional method

Tedious cash disbursement cycle – For the worker to get cash at a site is a manual and lengthy paperwork process resulting in **delay in completion of work and lower customer satisfaction**

Loss of control – There is **no possibility of tracking or controlling** the expenses once the funds are transferred

Errors and frauds – Keeping manual record of expenses is a big pain point for the worker and there is no visibility in real time for the company . Further there are chances of errors and frauds in the manual system . **86 % of employees admit to lying on expense reports and 1 in 5 expense reports filled incorrectly.**

No visibility in real time – Expenses are reported with bills after 10 to 15 days of site completion which leads to **inability in taking timely corrective action resulting in over spending.**

Productive time loss – Managers often complain of **productive time loss** in the traditional policy check and approval process which is lengthy and time consuming .

Limited and delayed access to analytics– Managers /Directors find it really difficult to understand the spend cycles , patterns and get **limited insights with manual reporting.** **Expenses cannot be compared to budgets** in realtime leading to delayed corrective actions

Problems faced by businesses having white collar employees making spend

Flow of transactions

Employee gets reimbursed on actuals after submission of bills and report

Advance or reimbursement, the amount is transferred to his personal bank account

He Spends through his account and records the transactions manually

Reports are submitted either manually or via Whats app after the trip

Policy check and approvals

The accounts team then has to compile and reconcile the expenses of the particular trip.

Problems in traditional method

Long Reimbursement cycle –Employee who incur expenses out of their pockets often find the reimbursement cycle very long.This **dissuades them from keeping appointments/trips towards the end of the month** as they do not want to spend from their personal amount.

Loss of control – There is **no possibility of tracking or controlling** the expenses once the funds are transferred.

Errors and Frauds –Keeping manual record of expenses is a big pain point for the employee and there is no visibility in real timefor the company . Further there are chances of errors and frauds in the manual system . **86 % of employees admit to lying on expense reports and 1in 5 expense reports filled incorrectly.**

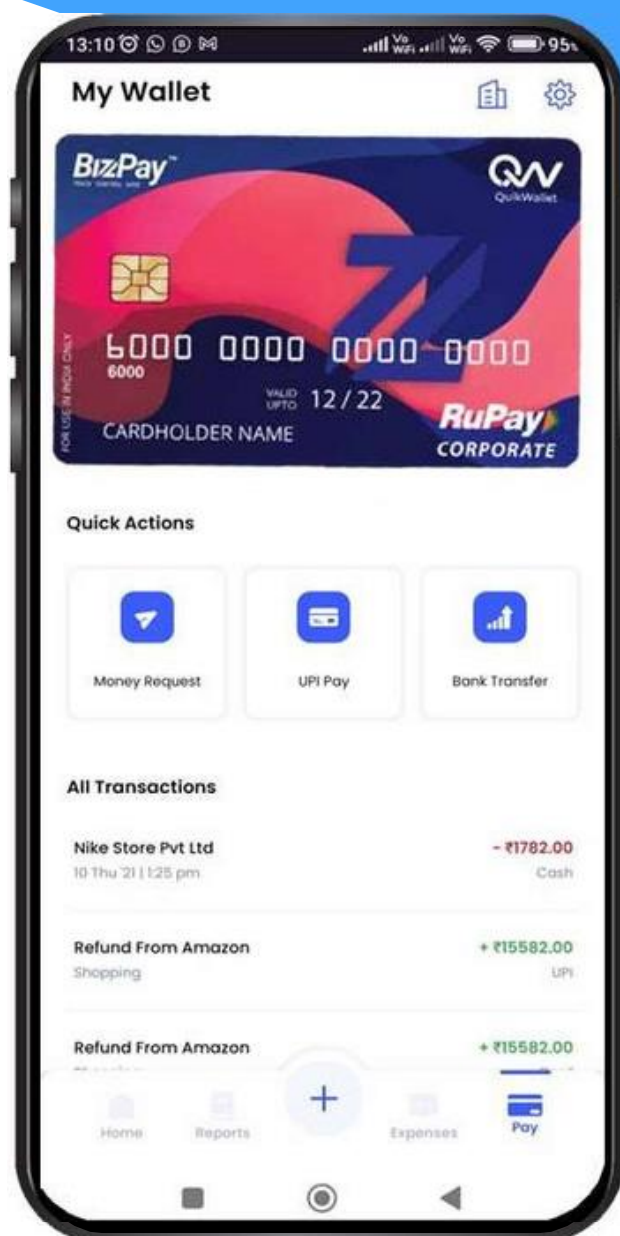

No visibility in real time – Expenses are reported with bills after 10 to 15 days of trip completion which leads to **inability in taking timely corrective action resulting in over spending.**

Productive Time Loss – Managers and Accounts team often complained of productive time loss in the traditional approval process which is lengthy and time consuming . **Small business takes 7.3 days on average to approve an expense report for reimbursement after it has been submitted.**

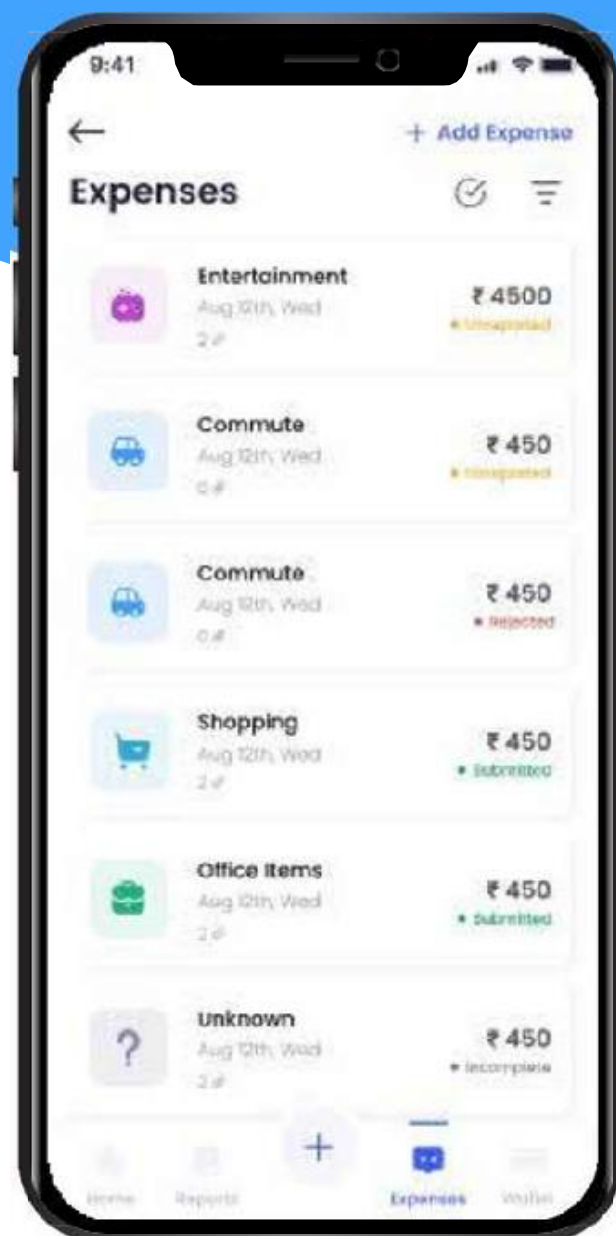

Lack of an ecosystem – There is **no integrated system for disbursing, spending and managing expenses** .This leads to input and from multiple places and effectively **loss of time and money** for the organisation.

HOW WE SOLVE

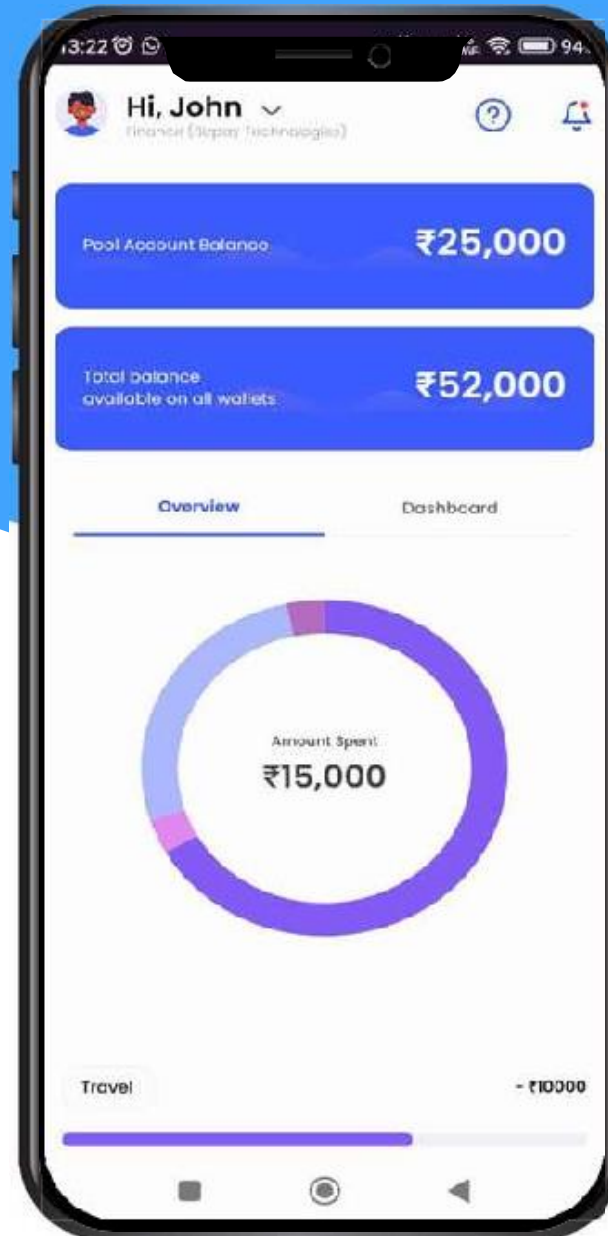

Prepaid card & mobile wallets for employees can be loaded with money.

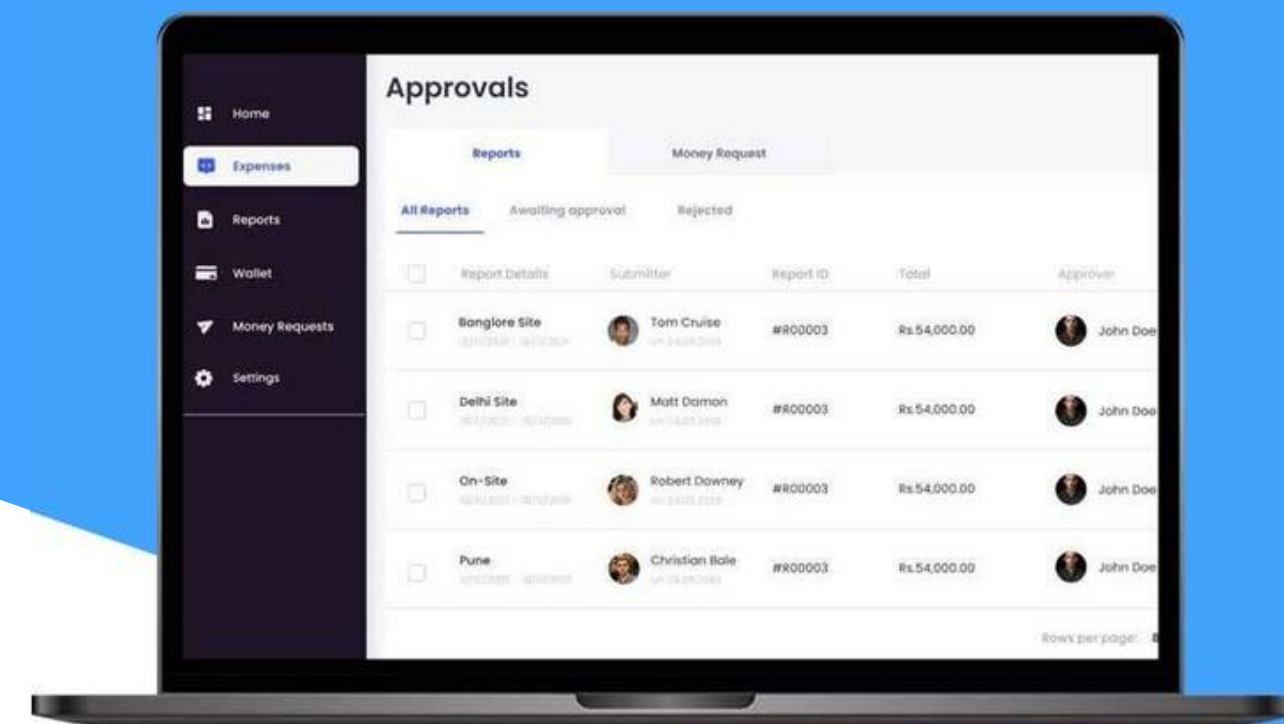

Real-time expense tracking on the fly expense report submission & swift reimbursement process.

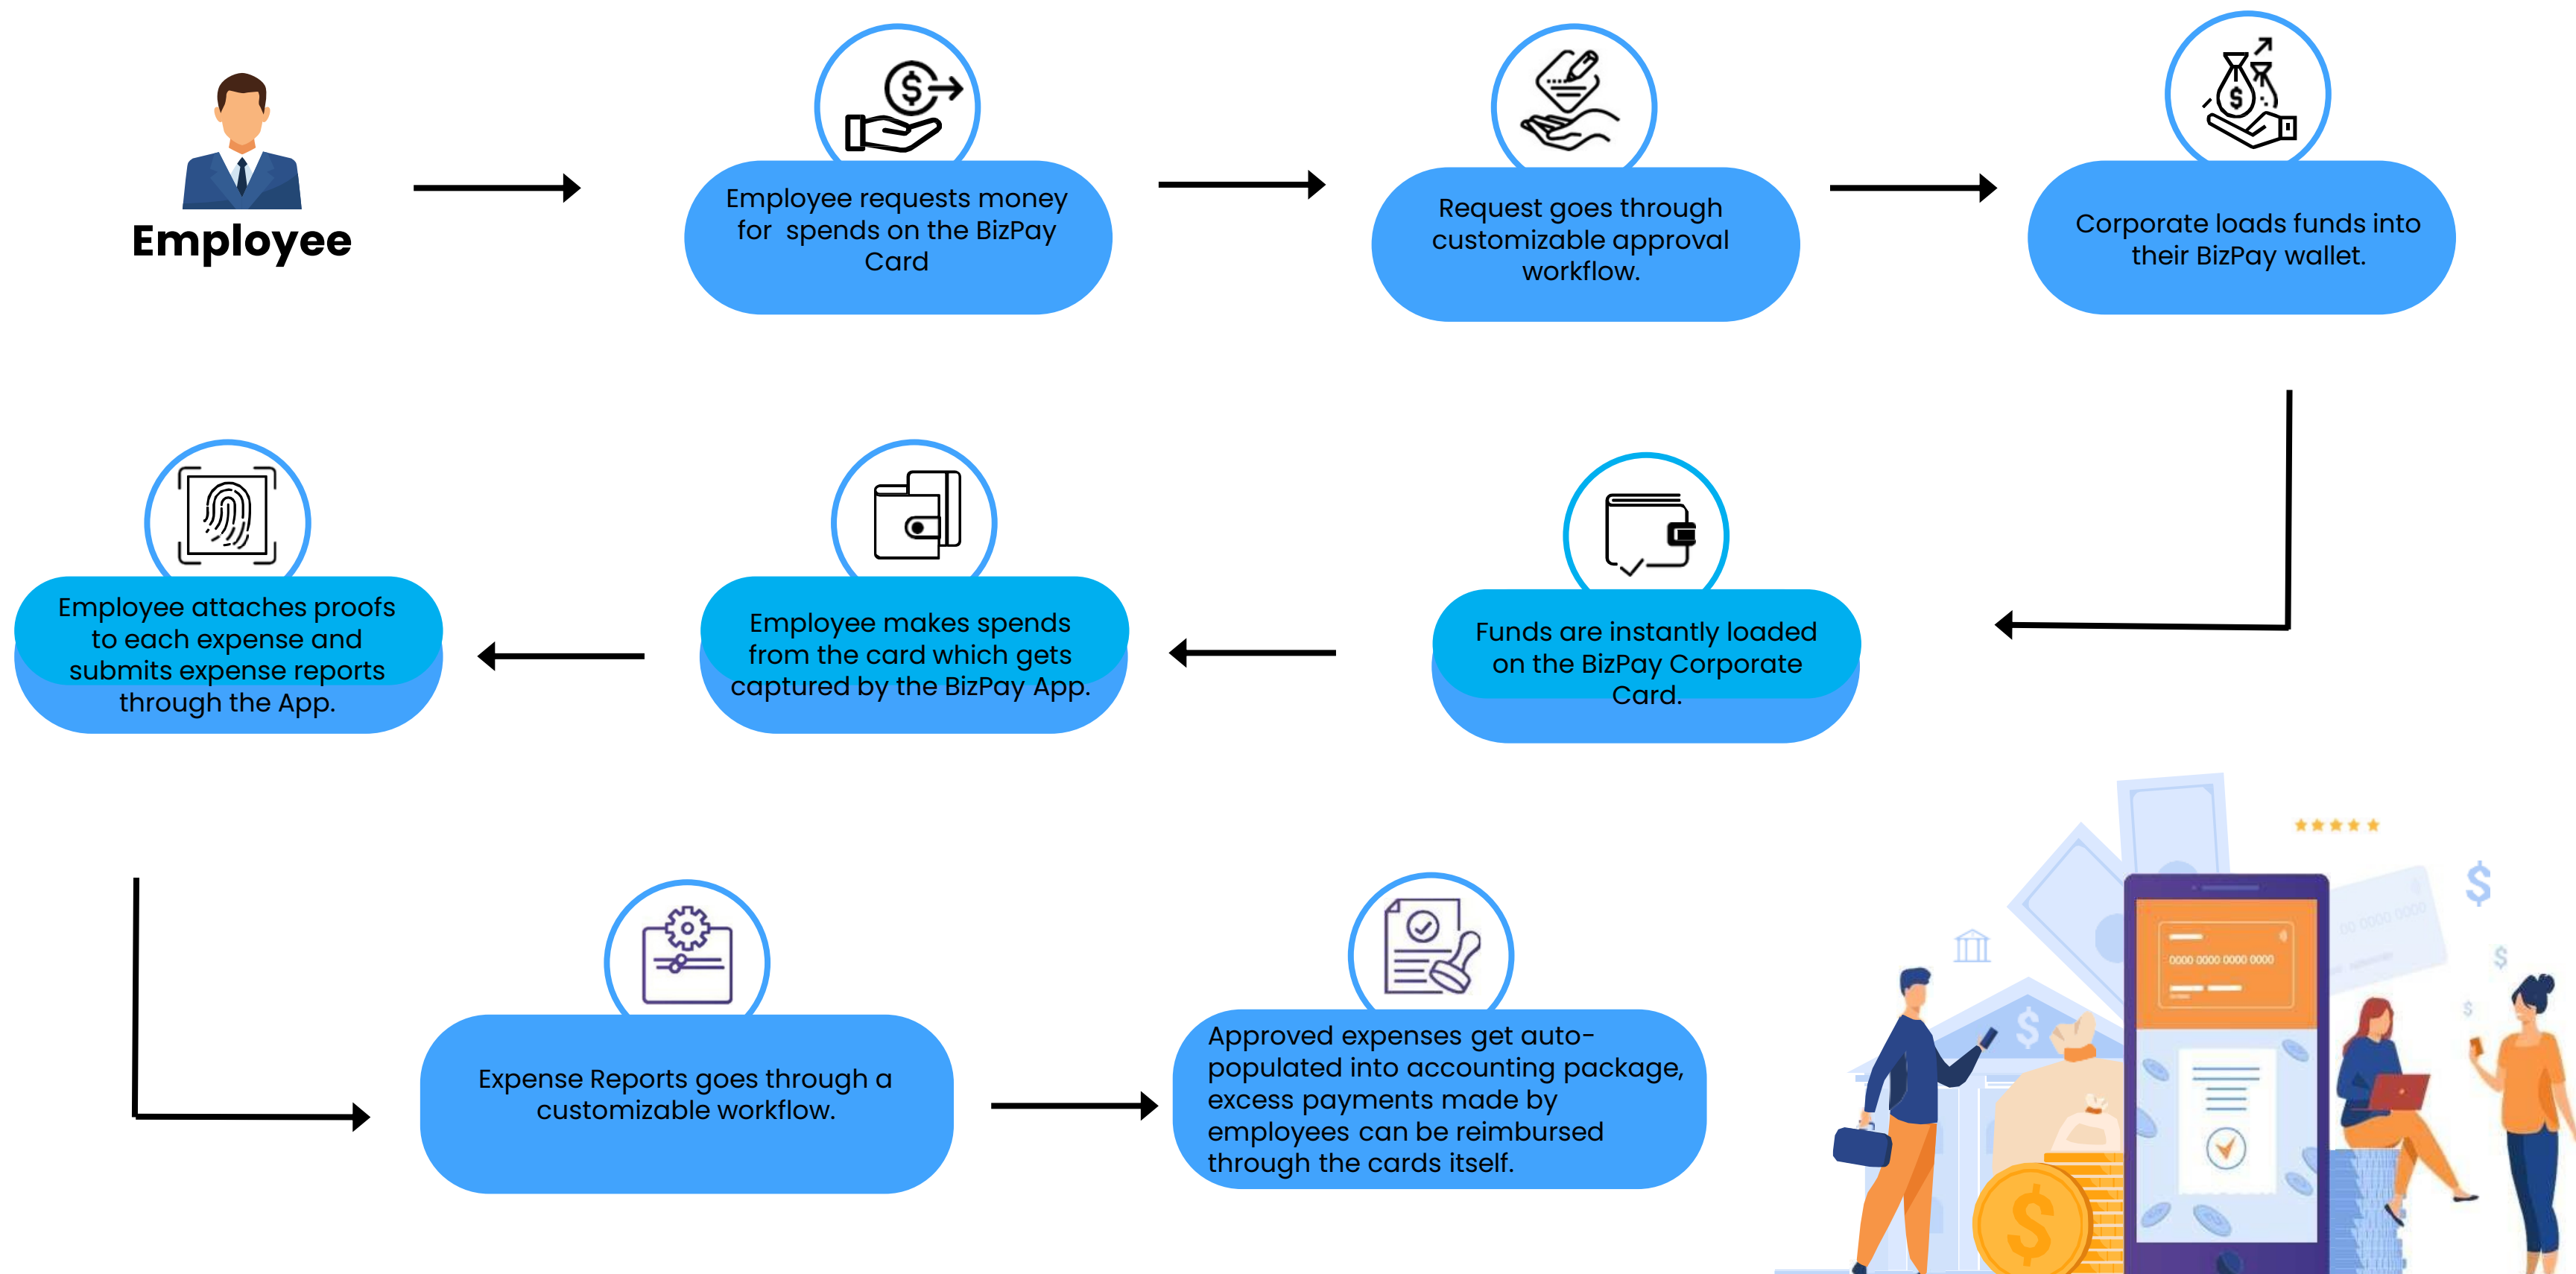

Complete visibility of every spend & smart fraud detection.

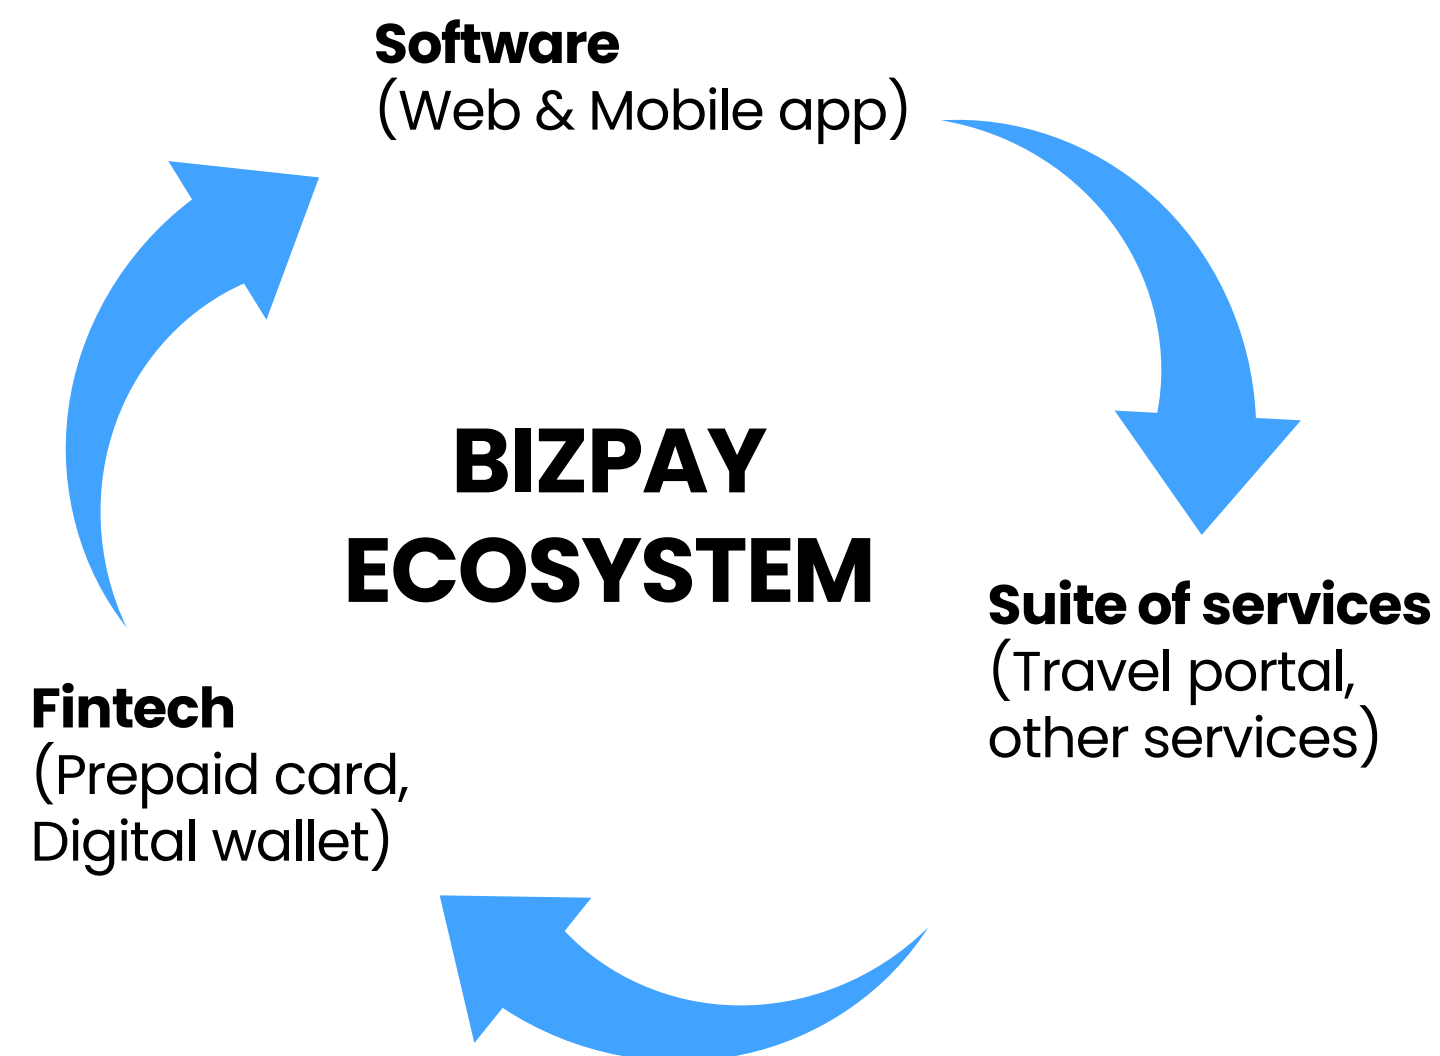

Automated reconciliation, approval workflows & accounting integration.

HOW IT WORKS

BIZPAY – A COMPLETE ECOSYSTEM

BIZPAY is a holistic business spends management solution as one can :

- ▶ Disburse funds through BIZPAY
- ▶ Make spends on portal and services of BIZPAY with open loop spends
- ▶ Manage these expenses using BIZPAY

SUCCESS STORY

Gained
200%

increase in the visibility of budget overruns

More than
87%

reduction in wasteful spending

Saved
53%

on expense management time & costs

Phase 1-India |
Phase 2- Middle East | Phase 3- USA |
Phase 4- Eastern & Central Europe |
Phase 5- Western Europe |
Phase 6- SAARC & South East-Asia

MOAT (Line of Defence)

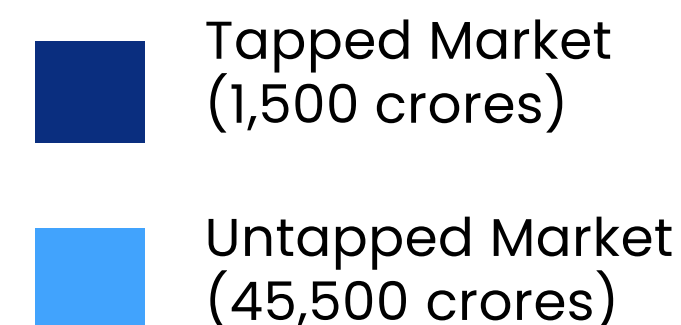

► Vast untapped market

45,500 crs or 96.8% of the market is yet to be tapped

Expense Management Solution

Total market size - 47,000 Crores

► Stickiness and High Switching Cost

We are an entire ecosystem with our **software** (Web & Mobile app), **fintech** (Prepaid card, Digital wallet) and **suite of services** (Travel portal, and other services).

This makes Bizpay **irreplaceable** and brings an element of stickiness to the solution. Secondly once adapted **switching cost is high** for the customers

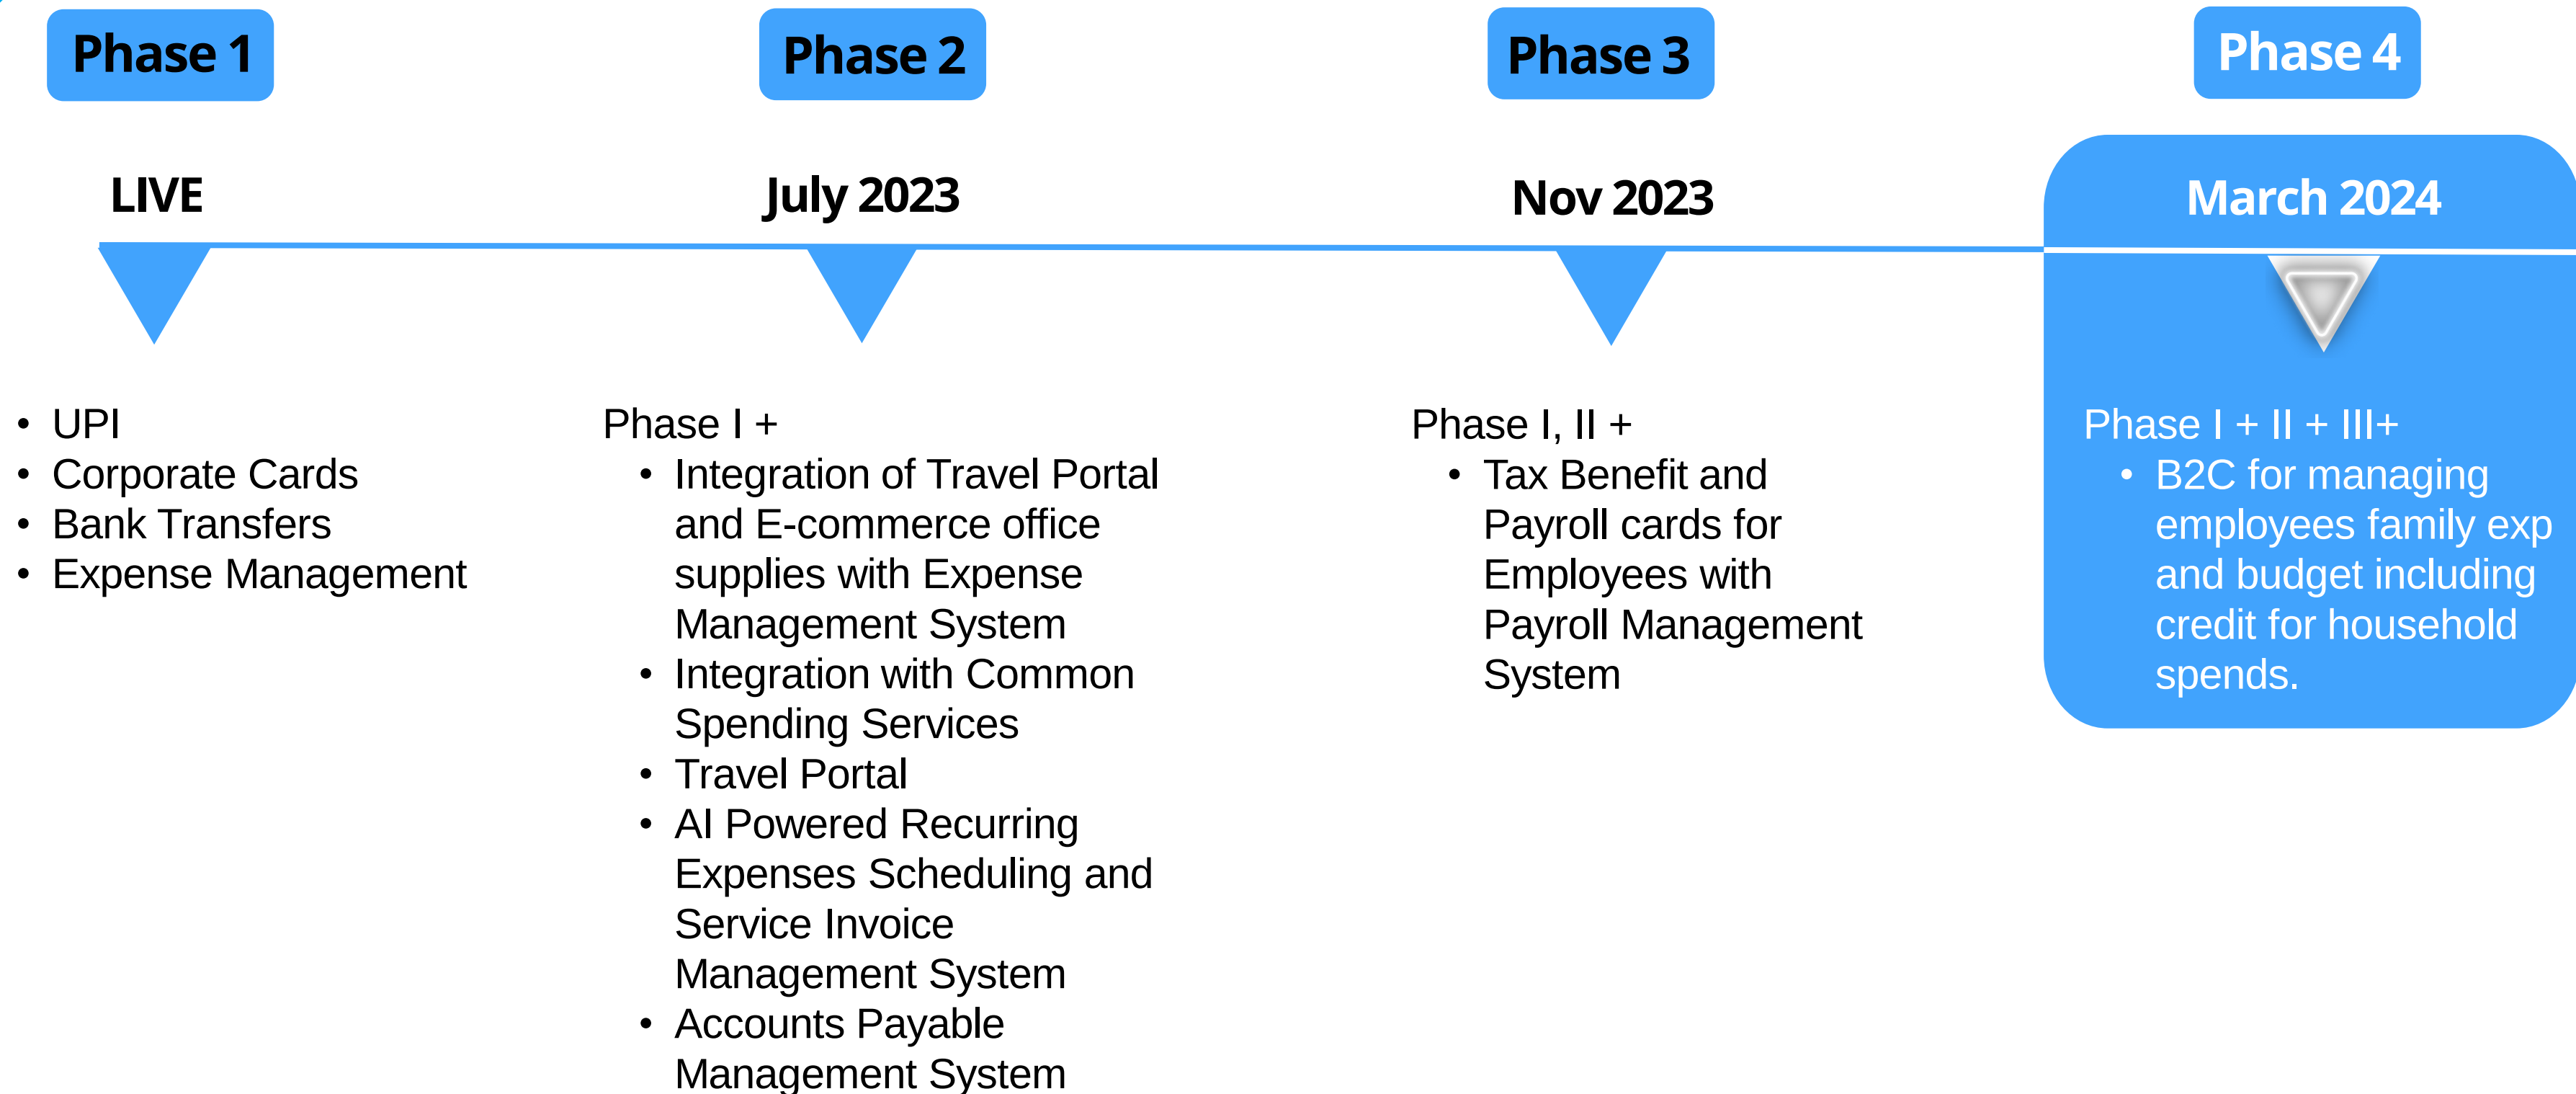

► Partner network

Bizpay is creating a strong network of **channel, referral, technical and integration partners**.

We have already integrated with **Tally**, one of the most widely used accounting software.

Our strategy is to use the less explored Tally model and **partner with boutique ERPs, HRMs and CRMs**
